

The Lead and Copper Rule (LCR) is a United States federal regulation of 1991, which limits the concentration of Lead and Copper allowed in public drinking water.

The action level for Lead is 15 ug/L or 0.015 mg/L and the action level for Copper is 1300 ug/L or 1.3 mg/L.

Most of the Lead and Copper found in drinking water leaches from customers pipes, fittings and solder rather than from the source water.

The City of Abbotsford uses plastic watermain when new or replacement infrastructure projects are constructed.

The City of Abbotsford is in compliance with the LCR. The results can be found in the menu tab.
